Introduction

From 2014 through 2019, the City of San Diego Park and Recreation Department (City) selected Kitchell CEM to perform Park Amenity Assessments (PAA) and abbreviated accessibility assessments for 235 different parks located throughout the City of San Diego. This report is a comprehensive summary report on the developed systems of the 235 parks assessed.

The PAA's at the parks included the following assessments: :

- Detailed Visual Assessments. The assessment included major park facilities and systems including (as applicable) site parking lots, site roadways, pedestrian walkways, playgrounds, sports fields, play courts, landscaping, above-ground storm water items (e.g. concrete drainage ditches), and other miscellaneous items identified visually on-site. The assessment did not include buildings, comfort stations, structures, or land value estimations. The assessment was based upon the condition of the facilities “as-is”; no recommendations were made for additional site improvements or enhancements.
- Abbreviated Accessibility Assessments. The abbreviated accessibility assessments were performed to determine the condition or existence of accessibility features, and whether major park areas were accessible (e.g. ramps provided, accessible parking stalls and pathways, etc.). The assessment did not include any buildings or major structures. This assessment was also based upon the condition of the facilities “as-is”; no recommendations were made for additional site improvements or enhancements, with the exception of items related to disabled accessibility.

Oak Neighborhood Park

The overall primary goal of these assessments was to identify the current park-related maintenance and capital backlogs, and to forecast anticipated future capital renewals for site systems. Other work to achieve this goal included the research and review of available as-built drawings, general development plans and other available information from the City staff. The information contained within this report will be used to assist City staff in planning for park maintenance and capital renewal, for both current backlogs and future park concerns (for the next 20 years).

The assessment of the 235 parks began in 2014 and ran through 2019. The assessment comprised a total of approximately 112,801,312 gross square feet (2,590 acres). The overall area (2,590 acres) represents the identified developed areas of the parks (including hardscape, landscape, and park amenities), and does not include buildings, structures, underground utilities, or open land areas beyond developed park areas.

During the course of the assessments and subsequent analysis, the team identified an estimated total of \$212,990,379 in maintenance and capital backlog items. Of this amount, \$21,888,688 was identified as maintenance backlog and \$191,101,691 as capital backlog. The backlogs are based on each park system’s overall condition, age, and stipulations for replacement. The total plant replacement value (PRV) of the developed areas for the 235 parks is estimated at \$1,968,172,155.

A condition index rating was determined by the City of San Diego and in turn was developed into a Park Condition Index (PCI) for established park areas only, excluding the systems described above. The 235 parks assessed received an average PCI rating of 11, indicating that the facilities are in an overall “Good” condition. Of these 235 facilities, 178 received a rating of “Good” (PCI 0-20), 30 received a rating of “Fair” (PCI 21-29), and 27 received a rating of “Poor” (PCI 30 or greater). The PCI formula and a summary table on condition findings by park type (Regional, Community, Neighborhood, and Mini Parks) for the 235 parks assessed is shown below.

$$PCI = \frac{\text{Cost of Maintenance Backlog} + \text{Cost of Capital Backlog}}{\text{Plant Replacement Value (PRV)}} \times 100$$

Asset Function	# Facilities Assessed	Gross Square Footage (GSF)	Maintenance Backlog (FY-2019)	Capital Backlog (FY-2019)	Total Backlog (FY-2019)	Plant Replacement Value (PRV) (FY-2019)	Avg. PCI	# of Facilities with PCI of Good	# of Facilities with PCI of Fair	# of Facilities with PCI of Poor
Regional	5	37,904,160	\$4,790,351	\$62,730,641	\$67,657,899	\$665,883,360	10	5	0	0
Community	52	40,132,025	\$12,792,962	\$63,007,822	\$76,574,438	\$763,437,960	10	45	7	0
Neighborhood	132	33,367,002	\$4,107,510	\$61,508,357	\$65,002,149	\$517,447,812	13	96	22	14
Mini	46	1,398,125	\$197,865	\$3,854,871	\$3,755,893	\$21,403,023	19	32	1	13
Total	235	112,801,312	\$21,888,688	\$191,101,691	\$212,990,379	\$1,968,172,155	11	178	30	27

Additional information regarding the assessments and details about the figures and findings is contained within this report, the report appendices, the yearly cumulative reports, and the individual park amenity assessment reports for each of the 235 assessed parks.

Park Amenity Assessments

Park Amenity Assessments (PAA) are conducted to determine deferred maintenance items for a given facility or grouping of facilities. In the PAA, the assessing team will identify any maintenance, repair, or capital replacement items that have not been reported or addressed through the City’s routine work order processes, and to address any maintenance items that have been properly reported, but for some reason have not been resolved. The main objective of a PAA is to determine the overall condition of a facility or group of facilities.

Items identified through a PAA are generally categorized into the following:

- (1) **Backlog.** Backlog consists of items related to regular maintenance, repair, or capital replacement work that was not performed when recommended or scheduled, possibly due to lack of funds or personnel to perform the maintenance. Backlog also includes items related to maintenance and repair that may have been previously unknown, but were also not addressed. These items were therefore deferred for a future period. These items should be addressed in the City’s upcoming budget cycle, typically within a time period of 1 to 5 years depending on the priority and applicability to the mission of the facility. Deferred Maintenance items are typically included within the Facility Cost Index (FCI) for each facility.
- (2) **Projected Capital Renewal.** These items consist of projected future needs for facility systems throughout the projected life cycle of the system. The projected needs include identification of costs associated with the systems as they reach the end of life (or in some cases, obsolescence), including regular scheduled maintenance, and replacement when required. Projected Capital Items are typically not included within the FCI for each facility.

Twin Trails

Mesa Verde Neighborhood Park

The individual park amenity assessment reports provide descriptions and cost estimates for the maintenance, repair, and capital replacement backlogs for each park and major systems. The information provided in the reports will assist the City with the following:

- Identifying the condition of the overall parks, as well as major systems within the parks.
- Identifying which parks may have systems or elements that would be deemed unsafe, or can no longer support the mission of the park where located (or community, if the parks are part of a joint use program).
- Identifying requirements to bring the park systems up to current standards, especially with regards to accessibility.
- Determining the estimated costs to address the current maintenance and capital backlogs, as well as the most critical items to be addressed by park system.
- Deciding whether to continue repairing a park system, or provide replacement of the system.
- Preparing budget and funding approaches for the next 20 years of projected costs.
- Identifying opportunities for optimizing funding via economies of scale (e.g. grouping a series of maintenance / renewal items together to get better contract pricing).

Windansea Beach Park

The Facility Condition Index (FCI) Standard

As a part of the assessments, a Facility Condition Index (FCI) was required for each park analysis. The FCI is defined by the National Association of College and University Business Officers (NACUBO) as the ratio of the Cost of Repairs (Deferred Maintenance, or DM) divided by the Current Replacement Value (CRV) of a facility. This standard calculation quantitatively rates the physical condition of the facility or group of facilities, and is a generally accepted industry standard. The ratio is typically expressed as the following:

$$\text{FCI} = \frac{\text{Cost of Repairs (DM)}}{\text{Current Replacement Value (CRV)}}$$

Torrey Del Mar

Based upon the scope for the park assessments, a typical FCI could not be calculated for an entire park site, as it would include items not included in the assessment scope (such as buildings, major structures, and assessor’s land values), which would normally be included in the full current replacement value. Instead, an abbreviated FCI value, Park Condition Index (PCI), was calculated for each park site. This PCI calculation utilizes the cost of both maintenance and capital backlog as well as the term Plant Replacement Value (PRV) in place of Current Replacement Value (CRV). This new PCI ratio is expressed as the following :

$$PCI = \frac{\text{Cost of Maintenance Backlog} + \text{Cost of Capital Backlog}}{\text{Plant Replacement Value (PRV)}} \times 100$$

The PCI ranges for Good, Fair, and Poor are designated by the City of San Diego staff (the PCI numbers are multiplied by 100 to provide whole values for City planning purposes). PCI values for each category are as follows:

- **Good:** PCI = 20 or less
- **Fair:** PCI = 21 to 29
- **Poor:** PCI = 30 or greater

Typically, costs for deficiencies identified during assessments are scheduled and budgeted for correction within a one to five year time frame, based on funding availability. For the purpose of this assessment, rather than spread out costs over a given period, all observed deficiency costs were grouped into FY-2019. This was done for two reasons. First, based upon site observations, the majority of deficiencies noted are related to deferred maintenance items, which in some cases had been deferred past the point of the life of the system. Second, all current costs should be included in order to increase the accuracy of the PCI, for a more accurate depiction of the physical condition of the facility’s assessed systems.

Deficiency Cost Estimates

The cost estimates, the backlog of maintenance, and capital backlogs identified in the facility assessment reports were prepared by Kitchell’s estimating department using data from real-time, field-verified construction estimates. The estimates include applicable direct cost and City Cost Index (CCI) adjustments for performing the work, and additional adjustments requested by the City to bring direct costs in line with the City’s historical costs for work. Also included are soft costs the City typically applies to administer, design, manage, regulate, and execute the work performed on the facilities. The soft cost factor used for the FY-2019 assessment was set at 1.50 for the purpose of determining the maintenance and capital renewal deficiency cost estimates.

Ashley Falls Neighborhood Park

Westview Neighborhood Park

Carmel Knolls Neighborhood Park

Balboa East

Plant Replacement Value (PRV)

As a part of the park analysis, Kitchell also prepared Plant Replacement Values (PRV) for each individual park's developed areas. The Plant Replacement Value is also known as the Current Replacement Value (CRV) in the PCI standard developed previously in this document. As noted previously, this value includes only the items included within the scope developed with the City, and excludes items such as structures, buildings, and land value estimations.

Based upon the observations at each park, Kitchell's estimating team developed per-square-foot costs for each of the major park systems, as included with Uniformat II categories and classifications. The per-square-foot costs developed were taken as an average across all the individual park areas assessed. For example, the development of a per-square-foot cost for site parking lots included costs for asphalt pavement, concrete pavement, curbs and gutters, and landscaping. Since the majority of parking lots within the assessment had asphalt pavement, the major portion of the per-square-foot cost includes installation of asphalt pavement sections to support vehicular traffic. Should future assessments determine that the majority of parking lots are concrete pavement, the cost will be adjusted accordingly.

In order to estimate the replacement value for the park developed areas, Kitchell prepared site maps of the park based upon the latest Google Earth images. The identified areas (parking lots, walkways, etc.) were compared against all available resources, including City as-built documentation, General Development Plans, and park boundary maps. Additionally, Kitchell reviewed each map to field verify the site areas identified, and make minor corrections based upon site observations, if applicable.

For the parks included in this assessment, 112,801,312 gross square feet (2,590 acres) were assessed. The Plant Replacement Value for the developed areas for the 235 parks assessed is \$1,968,172,155. Individual park PRV's are included in the park amenity assessment reports for each park.

Silver Terrace Mini Park

City Heights Community Park

Other Assessments

Abbreviated Accessibility Assessments

In addition to the condition assessment, all parks included in this assessment received an abbreviated accessibility assessment. This assessment was performed by the condition assessment team and was designed to assist in identifying readily achievable accessibility needs within the parks. The estimated cost of readily achievable accessibility items is \$6,727,210. Individual park accessibility deficiencies can be found in the specific park amenity assessment reports.

City of San Diego Assessment Findings

Background

The City oversees, manages and maintains numerous parks within the Greater San Diego area, with various sizes, facilities, and systems. As trustees and stewards of these properties, the City is responsible for the day-to-day operations and maintenance of the parks. Unfortunately, due to limited resources, the park facilities have accrued a backlog of maintenance and capital renewal items that should be addressed to ensure that the parks continue to fulfill their mission to the City, and that the City can continue to provide parks resources to meet the public’s demands. With this assessment project, the City has begun the process of evaluating the current conditions of these valuable resources, and determining the items requiring corrective actions of maintenance, repairs, or replacement. The results and findings contained in this report, and in the individual facility reports, are intended to provide the City with the information about the current condition of the facilities and those components and systems where maintenance, repair, or replacement may have been deferred. In addition, a twenty (20) year forecast of system capital renewal schedule was prepared for each park area.

The Facilities - Summary of Results and Findings

The 235 parks assessed comprised a total of 112,801,312 gross square feet (2,590 acres). This area represents the identified developed areas of the park (including hardscape, landscape, and park amenities), and does not include buildings, structures, or open land areas beyond developed park areas. The team identified an estimated total of \$212,990,379 in maintenance and capital backlog items. Of this amount, \$21,888,688 was identified as maintenance backlog and \$191,101,691 as capital backlog. The backlogs are based on each park system’s overall condition, age, and specifications for replacement.

Assessment Finding by Facility Age

The following table and figure illustrate the average PCI for the parks based on the facility age (Decade Built). With some limited variations, the year used to determine the park age was either provided directly by the City, or was taken as the “Initial Development” year listed on the park GDP. Overall, the average PCI for parks grouped by decade fell within the “Good” range (PCI 0-20).

Maintenance & Capital Backlog by Park System

The following table and figure illustrate the maintenance and capital backlog totals for the assessed park area by **Park System**. The table and chart shows each major park system assessed. Of interest to note is that the highest backlog costs were for playgrounds, followed by parking lots. Overall, the majority of the playgrounds observed had exceeded their useful life, and/or required upgrades to meet current code requirements for accessibility.

Table 2. Total Backlog by Park Systems – All Parks

System	Total Maintenance & Capital Backlog
Roadways	\$16,484,727
Parking Lots	\$63,240,806
Pedestrian Paving	\$14,919,910
Fencing, Walls, Signage, Other	\$5,316,229
Furnishings	\$1,647,074
Playing Fields and Courts	\$8,638,198
Playgrounds	\$98,027,400
Landscaping (Including Turf)	\$2,940,620
Above Ground Stormwater	\$1,775,415
Totals	\$212,990,379

Figure 2. Total Backlog by Park Systems – All Parks

Total Backlog by Park Systems – \$ 212,990,379

Maintenance & Capital Backlog by Reliability Level

To effectively address and manage the total maintenance and capital backlogs, the estimated costs for maintenance and capital backlogs have been categorized into three system **Reliability Levels**. The three reliability levels that were analyzed for the assessments are described and defined below.

- Level 1 Operations Impacts**

Level 1 Operations Impacts represent systems that can lead to partial or full shut-downs of the facility if the systems are allowed to exceed the end of their useful life or are not properly maintained. This would include playgrounds, athletic fields, outdoor courts and pedestrian walkway areas.

- Level 2 Deterioration**

Level 2 Deterioration represents systems that will shorten the life of the asset and cause deterioration to other systems if allowed to exceed the end of their useful life or are not properly maintained. This would include parking lots, roadways, and above-ground stormwater.

- Level 3 Appearance**

Level 3 Appearance represents systems that provide the appearance and quality of the facility. This would include systems such as landscaping, signage, fencing and park furnishings (picnic tables, benches, etc.).

The following tables and charts reveal the findings total maintenance and capital backlogs for Community, Neighborhood and Mini parks. To achieve optimum service reliability for the park systems, it is important to first address the Level 1 Operations Impacts followed by Level 2 Deterioration to ensure reliability of the Park facilities.

Table 3. Facility Maintenance & Capital Backlog by Reliability Level

Park Type	Level 1 Operations Total	Level 2 Deterioration Total	Level 3 Appearance Total	Total Backlog
Regional	\$21,905,305	\$45,215,853	\$399,833	\$67,520,991
Community	\$42,446,972	\$31,462,169	\$1,891,644	\$75,800,785
Neighborhood	\$53,824,507	\$8,717,175	\$3,370,227	\$65,911,909
Mini	\$3,412,969	\$187,142	\$156,583	\$3,756,694
Total	\$121,589,753	\$85,582,339	\$5,818,287	\$212,990,379

Jerebek Neighborhood Park

Additional Park Amenity Assessment Findings

The following Tables reveal the total maintenance and capital renewal backlogs, plant replacement values, and PCI's by **Council District and Community Planning Area**. These additional tables provide a means of geographically identifying areas of the City with the most backlogs. From these results and findings the City can now take the next steps towards their goals of funding and correcting the backlogs.

Table 4. Facility Maintenance & Capital Backlog by Council District - All Parks

District	# of Facilities Assessed	Total Capital Backlog	Total Maintenance Backlog	Total Backlog	Plant Replacement Value	Average PCI
1	26	\$16,141,729	\$4,455,430	\$ 20,597,159	\$178,196,838	12

Total	235	\$191,101,691	\$21,888,688	\$212,990,379	\$1,968,172,155	11

Of the maintenance and capital renewal costs, approximately 84% of the identified items fell into two categories, "Site Development: Playgrounds" (\$5,381,355, approximately 60% of the maintenance and capital backlog cost) and "Parking Lots" (\$2,121,221, approximately 24% of the maintenance and capital backlog cost). The following table illustrates the costs for "Site Development: Playgrounds" and "Parking Lots" broken down by park type (Regional versus Community versus Neighborhood versus Mini).

Table 6. Facility Maintenance & Capital Backlog by Highest System - All Parks

	Site Development: Playground	Parking Lot
Regional	\$18,925,287	\$36,987,614
Community	\$28,660,552	\$17,917,503
Neighborhood	\$46,775,607	\$6,489,811
Mini	\$3,568,937	\$172,355
Totals	\$97,930,383	\$61,567,283

Playground equipment assessed generally was in fair to poor condition, and in most cases, dated back to the installation date of the park. The City has established a useful life for playgrounds of 15 years. Despite the condition of the equipment, the City confirms that the playgrounds are safe. Additionally, it is recommended the playgrounds be upgraded to meet current accessibility codes (including creating accessible paths to equipment, ramps down to play areas, etc.). The cost for playgrounds includes, as applicable, costs for replacing both playground equipment and surfacing, and also includes an additional 25% mark-up factor for accessibility upgrades.

The parking lots assessed were primarily asphalt concrete over aggregate base, with some small areas of concrete paving. Per site observations, the majority of the asphalt had visible surface deterioration, possibly due to a lack of preventative maintenance and regular repairs. In some areas, it appeared that the asphalt pavement had substantially deteriorated, showing evidence of structural failure (e.g. "alligator" cracking). This could be due in part to extended deferred maintenance, but also could be attributed to other factors such as subgrade deterioration, and/or that the pavement has been subjected to loads higher than included for the original design. The cost for pavement repairs and replacements conservatively assume a structural section that may be larger than the existing, to account for potentially higher loads and to reduce future accelerated deterioration.

As a part of the Reliability Level categories, "Site Development: Playgrounds" have been assigned to Reliability Level 1: Operations Impacts, and "Parking Lots" to Reliability Level 2: Deterioration. The City should begin developing an action plan to address conditions that could put the City at some liability or risk, and decide to either repair or replace the system elements that are beyond their useful life. "Site Development: Playgrounds" are included in Reliability Level 1: Operations Impacts, and are not only crucial to the mission of the parks but may put the City at higher risk due to extended deterioration or potential failure, even though the City ensures the playgrounds are safe. As old play equipment is removed due to age, the play value of the park diminishes resulting in fewer park users thus reducing the park's ability to achieve the City's park mission. We recommend that the City focuses on the playground system first.

Standley Community Park

Capital Renewal

In addition to identifying backlog of maintenance and capital backlogs for the systems and elements at the parks, an additional goal of the project was to identify and forecast for a 20-year period for both the maintenance and capital backlog, and future capital renewal for the individual park systems. Depending on the park system and expected useful life, a portion of on-site elements are expected to expire, or require significant maintenance, within the 20-year period selected. The 20-year plan includes maintenance and capital renewal items organized into the following categories, according to Uniformat II, and in accordance with the scope developed with the City:

- Roadways
- Parking Lots
- Pedestrian Paving
- Site Development: Fencing, Walls, Signage, Other
- Site Development: Furnishings
- Site Development: Playing Fields and Courts
- Site Development: Playgrounds
- Accessibility
- Landscaping (Including Turf)
- Above-Ground Stormwater

The cost projections and determination of capital replacements for the systems were based on the following (in no particular order):

- Field determination by the assessment team as to the probable years of remaining life, following improvements recommended for FY-2019.
- Direct City requests for maintenance and/or capital renewal, independent of the projected years of remaining life (e.g. replacement of playgrounds at various sites).
- Known chronological age and projected remaining years of life for the system.

Sycamore Canyon

Firehouse

Charles Lewis Memorial Park

Oak Glen

Capital renewal identified for the 20-year period should be considered as additional future needs to the current year maintenance and capital backlogs. These projections are based on the assessment team’s observations as to the useful remaining life of the systems, as well as the age of the system (if known). Average useful life expectations and maintenance cycles were derived from a variety of sources, including the Building Owners and Managers Association (BOMA) International Standards, the California Department of Transportation (Caltrans) Maintenance Technical Advisory Guide (MTAG), and the 2011 Architectural Manual’s Expected Useful Life Table prepared by the Washington State Department of Commerce, Office of Affordable Housing. Additionally, the assessment team enlisted the support of Kitchell’s Facility Management (FM) Department, which used real-time data to verify expected useful life cycles for various park systems and elements.

Once maintenance cycles were established, yearly maintenance costs were derived using one of the following methods..

- For systems consisting of more than 90% of one particular material / construction method (e.g. asphalt paving for most parking lots), an actual hard repair cost was used (e.g. slurry sealing of asphalt pavement, etc.). These costs were prepared by Kitchell’s estimators, drawing from RS Means Construction Cost Data, and included allowances for smaller sub-systems within the system (e.g. for parking lots, inclusion of minor costs for curbs, gutters, etc.).
- For systems consisting of multiple types of materials / construction costs (e.g. baseball field with multiple types of equipment and field surfacing), a yearly repair cost was estimated using a percentage of current replacement value costs. The percentage varied from system to system, and was adjusted based upon the yearly repairs anticipated for each system

For systems with detailing beyond the scope of the visual site assessment (e.g. “Site Development: Fencing, Walls, Signage, Other” category, which included general site fencing, above-grade visible utilities, etc.), an estimated cost-per-square-foot was applied to the park’s calculated developed area. The estimated cost was based upon observations made, and adjusted per sub-category (i.e., different costs-per-square-foot were used for site signage versus fencing and retaining walls).

The table below illustrates the average useful life expectations for the park systems used in the assessment. As each park system is made up of multiple elements, the age shown represents the highest occurring element within the system, based upon site observations of the park area assessed. For example, within parking lots, the overwhelming majority of the hardscape observed was asphalt paving, with only minor portions of concrete paving and curbs (if present). Therefore, the useful life expectation for parking lots was based on asphalt concrete rather than standard concrete.

****Site Development Miscellaneous: Useful life years varied by system and sub-system.**

The goal of projecting a multi-year capital renewal plan is to provide the City a long-range forecast of potential future needs for each park system, based on the current condition and estimated useful life. This approach will allow for the City to estimate when park systems are due for significant maintenance as well as full replacement, and budget accordingly.

To identify and forecast the multi-year capital renewal projection for the parks assessed, the assessment team reviewed the following to meet the project goal:

- Identify what systems exist at a park.
- Identify which systems present are maintained by the Parks and Recreation Department, and which ones are maintained by separate associations / organizations.
- Estimating when the system was installed, or when the system last had significant maintenance.
- Forecasting how many years of useful life remain for each park system, and when the system would need either significant maintenance, or full replacement. Projections for maintenance and replacement were based upon the assumption that all deficiencies identified in FY-2019 were addressed and corrected.

Capital Renewal Schedule

The Capital Renewal Schedule provided is intended to give the City a snapshot of both the current year capital and maintenance backlogs, and the projected maintenance and capital renewal costs for the 20-year forecasting period. Should the maintenance and capital backlogs not be completed in current year, the backlogs would then roll over into following year, and increase in accordance with the inflation percentage used for the 20-year forecasting period. The Capital Renewal Schedule for each park is included in the individual park reports

The determination of the amount of project maintenance and capital renewal was based on BOMA, the California Department of Transportation (Caltrans) Maintenance Technical Advisory Guide (MTAG), the 2011 Architectural Manual's Expected Useful Life Table prepared by the Washington State Department of Commerce, Office of Affordable Housing, and Kitchell's FM department recommendations. The following table illustrates the maintenance schedules assumed for each park system and/or element. The cost associated with each repair item was based on the maintenance needs for the highest occurring element within the system (example: parking lot costs were based on asphalt pavement maintenance requirements), or on a percentage of the estimated replacement cost for the system or element.

City of San Diego Conclusions and Recommendations

Conclusions

The park amenity assessments performed for the 235 park sites followed typical approaches and methods for facility assessments, with minor revisions made in the analyses to accommodate City requirements for long-term planning and data incorporation. Routine meetings were held on a regular basis to ensure that Kitchell was meeting scope requirements and City needs for assessments and analysis.

As noted in previous sections of this document, the assessment team reviewed and assessed a total of 235 parks throughout the Greater San Diego area, in accordance with the scope developed with the City. The assessment teams covered a total of 112,801,312 gross square feet (2,590 gross acres) of developed park areas, with a total estimated Plant Replacement Value (PRV) of \$1,968,172,155 for the developed areas. Maintenance and capital backlogs for the 235 parks totaled \$212,990,379. Using the PCI ratings developed for the parks, the 235 parks assessed received a rating of 11, indicating that the facilities are in an overall “Good” condition. Of these 235 facilities, 178 received a rating of “Good” (PCI 0-20), 30 received a rating of “Fair” (PCI 21-29), and 27 received a rating of “Poor” (30 or greater).

Santa Clara Point

Detailed below is the PCI formula developed for the parks assessments, and a summary of the park amenity assessment findings by park area.

$$PCI = \frac{\text{Cost of Maintenance Backlog} + \text{Cost of Capital Backlog}}{\text{Plant Replacement Value (PRV)}} \times 100$$

Asset Function	# Facilities Assessed	Gross Square Footage (GSF)	Maintenance Backlog (FY-2019)	Capital Backlog (FY-2019)	Total Backlog (FY-2019)	Plant Replacement Value (PRV) (FY-2019)	Avg. PCI	# of Facilities with PCI of Good	# of Facilities with PCI of Fair	# of Facilities with PCI of Poor
Regional	5	37,804,160	\$4,790,351	\$62,730,641	\$67,657,899	\$665,883,360	10	5	0	0
Community	52	40,132,025	\$12,792,962	\$63,007,822	\$76,574,438	\$763,437,960	10	45	7	0
Neighborhood	132	33,367,002	\$4,107,510	\$61,508,357	\$65,002,149	\$517,447,812	13	96	22	14
Mini	46	1,398,125	\$197,865	\$3,854,871	\$3,755,893	\$21,403,023	19	32	1	13
Total	235	112,801,312	\$21,888,688	\$191,101,691	\$212,990,379	\$1,968,172,155	11	178	30	27

While the findings in this report identify potential action items regarding maintenance and capital backlog, the results did not produce any highly abnormal conclusions. The majority of the maintenance and capital backlog items related to normal usage, daily wear and tear, accelerated deterioration from a lack of maintenance, and expected damage resulting from system interaction (e.g. tree roots causing damage to adjacent hardscapes). Additionally, in some instances, park systems were observed to have accelerated damage where systems were not being used for their original functions (e.g. pedestrian walkway damage where maintenance staff use the pathways for vehicular access).

Recommendations

The results in the park amenity assessments for the parks assessed reveal the need to develop action plans to address both existing maintenance and capital backlogs, and provide for long-term planning for future maintenance and capital renewal items. Significant funding should be designated for both current year backlogs and future improvements identified in the 20-year Multi-Year Renewal plan.

In order to fully address the maintenance and capital backlogs identified during the assessment, as well as provide for future funding, we recommend the following action plans be developed. The first two recommendations focus on the existing park backlogs, and their ability to fulfil their mission and to serve the public demands.

Recommendation #1: FY-2019 Action Plan by Reliability Level

The first priority of the City should be to address maintenance and capital backlog items identified for the 235 parks assessed. The purpose of this plan would be to address backlog items identified in the park amenity assessments as “Critical” or “Potentially Critical”, and to stop accelerated deterioration. The plan should first determine which of the parks has the highest critical functions to the City based upon usage, accessibility, and joint use. After this has been determined, the plan should provide a schedule for addressing backlog items by Reliability Level, beginning with Reliability Level 1 (Operations Impacts) and work through each level accordingly.

Recommendation #2: 20-Year Funding Plan by Reliability Level

Following the development of the Action Plan, the next step for maintenance of the parks should be to develop a plan to address future maintenance and capital renewal items for the parks assessed, based upon the existing site systems. As with the Action Plan, the plan should first determine which of the parks has the highest critical functions to the City based upon usage, accessibility, and joint use. The plan should address not only schedules for the maintenance, but also perform a review of internal City staffing available to perform various maintenance work recommended, as well as develop an on-call list of vendors and companies that can be hired to perform additional work to support the City’s efforts. This plan will be critical to ensure that the parks can continue to meet the needs of the public, by providing long-range planning.

In addition to addressing the mission of the existing parks, another critical component to ensure that the City continues to meet the public demand is additional long-term planning to meet diverse changing and growing needs of the increasing population. The recommendation presented below focuses on future planning, not only for the current parks, but potential future parks.

Recommendation #3: Park Utilization Plan

One component of future planning for the City park system is to ensure that the parks continue to meet the needs of the public they serve. A Parks System Master Plan would review existing park facilities, the condition of those facilities, facility usage and long-term maintenance and capital renewal costs to determine where park efficiencies can be increased. Depending on land value estimates and changes in the real estate market, it may be more cost efficient to improve and further develop existing parks in some communities rather than develop new parks.

Gompers

In conclusion, the results, findings and recommendations presented by this comprehensive report and the individual park amenity assessments for the individual parks provide source information to assist the City with future planning and budgeting.

APPENDIX

Below is a list of Appendices that support and are applicable to the report results and findings of the Park Amenity Assessment (PAA) project. The Appendix is intended to provide detailed information to assist in referencing the summary information and exhibits found in the text of this document.

APPENDIX C - Glossary of Terms

Abbreviated Accessibility: This term is used when referencing needs associated with repair, replacement, or modification of a site system to achieve selected accessibility barrier removal.

ADA: Americans with Disability Act

BOMA: Building Owners and Managers Association

Backlog: Term used to refer to deficiencies for facility components, equipment or whole system that needs to be resolved.

Budgeting: A process and method how an estimate of incoming funds and expenditures is adjusted to account for operational realities in order to provide for the cost of maintaining facilities. Traditional budgeting issues may include anticipated needs, organizational growth, the acquisition of new assets, operations and maintenance, deferred maintenance and insurance.

Building: An enclosed and roofed structure that can be traversed without exiting to the exterior.

Capital Renewal: Projected or future replacements (excluding suitability and energy audit work) that include the replacement of park systems or elements that have or will reach the end of their life cycle in the future.

Capital / Capital Planning: Process of planning expenditures on assets whose cash flows are expected to extend beyond one year. The planning takes into consideration the funding available, the firm's priorities and the anticipated return on investment. Capital planning considers a broad range of financial considerations (such as the cost of capital, organizational risk, and return on investment...), over an extended timeline so as to more effectively predict and manage the fiscal requirements of a real estate portfolio.

Calculated Next Renewal: The year a system or element would be expected to expire, based solely on the date it was installed and the expected service life of the system.

Condition: Condition refers to the state of physical fitness or readiness of a facility, system or systemic element for its intended use.

Cost Model: Parametric equations used to quantify the condition of building systems and estimate the cost necessary to sustain a facility over a given set of reporting periods. These estimated costs can be presented over a timeline to represent a capital renewal schedule.

Current Replacement Value (CRV): CRV is a standard industry cost estimate of materials, supplies and labor required to replace a facility at existing size and functional capability. Please note that the terms Plant Replacement Value and Current Replacement Value have the same meaning in the context of determining Facility Condition Index.

Deferred Maintenance or Maintenance Backlog: Is condition work (excluding suitability and energy audit needs) deferred on a planned or unplanned basis to a future budget cycle or postponed until funds are available.

Deficiency: A deficiency describes a condition in which there exists the need to repair a park system or component that is damaged, missing, inadequate or insufficient for an intended purpose.

Element: Major components that compromise park systems.

Facility: A facility refers to site(s), building(s), or building addition(s) or combinations thereof that provide a particular service or support of a given purpose.

Facility Condition Index (FCI): FCI is an industry-standard measurement of a facility's condition that is the ratio of the cost to correct a facility's backlog requirements to the Park Replacement Value of the facilities – the higher the FCI, the poorer the condition of the facility. After an FCI is established for all facilities within a portfolio, a facility's condition can be ranked relative to other facilities, The FCI may also represent the condition of a portfolio based on the cumulative FCI of the portfolio's facilities.

Gross Square Feet (GSF): The size of a park within the defined property boundary in square feet.

Hard or Direct Costs: Direct costs incurred in relation to a specific construction project. Hard costs may include labor, materials, equipment, etc.

Inflation: The trend of increasing prices from one year to the next, representing the rate at which the real value of an investment is eroded and the loss in spending power over time.

Interest: The charge for the privilege of borrowing money, typically expressed as an annual percentage rate and commonly calculated using simple or compound interest calculations.

Life Cycle: The period of time that a system or element can be expected to adequately serve its intended function.

Maintenance: Work necessary to realize the originally anticipated life of a fixed asset, including buildings, fixed equipment and infrastructure. Maintenance is preventative, whereas repairs are curative.

NACUBO: Refers to the National Association of College and University Business Officers (NACUBO). NACUBO published their version and method for calculating the Facility Condition Index (FCI) in 1991 which is widely recognized as a means of measuring facility condition.

Next Renewal: The assessor adjusted expected useful life of a system or element as a result of on-site inspection.

Nominal Value: A value expressed in monetary terms for a specific year or years, without adjusting for inflation – also known as face value or par value.

Operations: Activities related to normal performance of the functions for which a building is used (e.g., utilities, janitorial services waste treatment).

O&M: Operations and Maintenance

Park Amenity Assessment (PAA): The process of performing a physical evaluation of the condition of a facility and its systems.

Park Condition Index (PCI): Revised Facility Condition Index (FCI); the PCI includes developed areas of parks included with the assessments. Costs for the PCI include site roadways, parking lots, playing fields and courts, playgrounds, above-ground storm drainage structures, landscaping, and other miscellaneous items identified within the developed park areas.

Park Replacement Value (PRV): Cost to design and construct a notional facility to current standards to replace an existing facility at the same location.

Present Value (PV): The current worth of a future sum of money or stream of cash flows given a specified rate of return. Future cash flows are discounted at a client specified discount rate.

Reliability Level: Reliability levels are used to determine and categorize the importance and priority of park systems.

Repairs: Work to restore damages or worn-out facilities to normal operating condition. Repairs are curative, whereas maintenance is preventative.

Replacements: An exchange of one fixed asset for another that has the same capacity to perform the same function. In contrast to repair, replacement generally involves a complete identifiable item of reinvestment (e.g., a major building component or subsystem).

Return on Investment (ROI): ROI is a financial indicator used to evaluate the performance of an investment as a means to compare benefit.

Rough Order of Magnitude (ROM): An estimate of costs and time provided in the early stages of a project when the scope and requirements have not been fully defined.

RS Means: An independent third party provider of building industry construction cost data.

Site: A facility's grounds and its utilities, roadways, landscaping, fencing and other typical land improvements needed to support the facility.

Soft Costs: Indirect costs incurred in addition to the direct construction cost. Soft costs may include professional services, financing, taxes, etc.

System: System refers to building and related site work elements as described by ASTM Uniformat II, Classification for Building Elements (E1557-97), and a format for classifying major facility elements common to most buildings. Elements usually perform a given function, regardless of the design specification, construction method or materials used. See also, "Uniformat II".

Uniformat II: Uniformat II (commonly referred to simply as Uniformat), is ATSM Uniformat II, Classification for Building Elements (E1557-97) – A methodology for classifying major facility components common to most buildings.

Year Built: The year that a park was originally built, based on substantial completion.

[The page contains a large, faint watermark that reads "www.ck12.org".]

Together, Building Value Every Day.
